

The Cybercrime Economy has evolved from phishing and email scams into the greatest threat the Internet has faced since its inception. Ransomware assaults, the takeover of industrial control (SCADA) systems, the proliferation of botnets, the hacking of customer service and health records, the Darkweb, and the loss of personal privacy on the Internet have resulted in a non-stop game between regulators and criminals that have left us with fewer alternatives for secure information transfer.

To counter the threat towards business and the corporate environment, the Canadian Tactical Officers Association, in conjunction with Seneca College, is now offering the following cutting edge training courses to help you navigate the Cybercrime environment:

- Principles of Information Security
- Security Policies
- O/S Security- Windows
- Ethical Hacking and Network Defense
- Legal and Ethical Issues in IT Security
- Firewalls and VPN's
- Hacker Techniques
- Mobile Application Security Design
- Computer Forensics
- Wireless and Mobile Device Security
- Network Security and Penetration Testing
- Capstone Information Security Project

All courses are accredited by Seneca College, can be accessed on line, are modular and can be completed in any order. Future training will be offered at Seneca College Campus facilities, as a training venue for Intellectual courses (classrooms) and can use it for a promotional venue seminars etc. Please contact _____ for further information and registration details.
